FIG. 13-A is a perspective view of a brush assembly 122-2L in a retracted position. The brush assembly 122-2L includes a handle 122-2L and a brush head 134L. The brush head 134L is mounted to the handle 122-2L via a pivot 136. The brush head 134L is shown in a retracted position, where the bristles are folded back against the handle 122-2L. The handle 122-2L is shown in a retracted position, where the handle is folded back against the brush head 134L. The brush assembly 122-2L is shown in a retracted position, where the brush head 134L and the handle 122-2L are both folded back against each other.

FIG. 25-B

FIG. 25-A

34/73

FIG. 26-A is a perspective view of a first embodiment of a device for measuring the length of a limb. The device includes a first rod 10 and a second rod 20. The first rod 10 is connected to the second rod 20 by a hinge 30. The hinge 30 is located at one end of the first rod 10 and the second rod 20. The first rod 10 has a first end 11 and a second end 12. The second rod 20 has a first end 21 and a second end 22. The first end 11 of the first rod 10 is connected to the first end 21 of the second rod 20 by the hinge 30. The second end 12 of the first rod 10 is connected to the second end 22 of the second rod 20 by the hinge 30. The first rod 10 and the second rod 20 are made of a material that is flexible and can be bent. The hinge 30 is made of a material that is rigid and can hold the first rod 10 and the second rod 20 in a fixed position. The device is used to measure the length of a limb by placing the first rod 10 and the second rod 20 along the limb. The hinge 30 is placed at the joint of the limb. The first rod 10 is placed along the upper part of the limb and the second rod 20 is placed along the lower part of the limb. The length of the limb is measured by the distance between the first end 11 of the first rod 10 and the second end 22 of the second rod 20.

FIG. 49-A

FIG. 49-B

FIG. 49-A is a perspective view of a mechanical assembly. It features a long, thin, cylindrical shaft with a series of small, circular, raised features along its length. A curved, flexible component is attached to the shaft, and a small, circular, textured component is visible near the base. An arrow points to the curved component. FIG. 49-B is a perspective view of a similar mechanical assembly, but with a different curved component. Both views show the shaft and the curved component in a similar orientation.
